```java
class main
{
    public static void main (string args
    {
        Scanner s = new Scanner (System .in
        int n;
        string name;
        string author;
        int price;
        int numpages.
        System. out. petutln ("enter no of boo
        n = s.nextInt();
        Books b[];
        b = new Books[n];

        for(int i=0; i<n; i++)
        {
            System. out. println ("Enter name,
                                author; price,
                                number of ages"
            name = s.next();
            author = s.next();
            price = s.nextInt();
            numpages = s.nextInt();
            b[i] = New Books (name, author,
                                price, numpag
        }
        for(int i=0; i<n; i++)
        {
            system. out. println (b[i]);
        }
    }
}
```

output :-

enter no of books
